Product attributes:

Product codes:

Reference: OCCAS/DANOIS/1
EAN13: -
UPC: -

Product features:

Composition: Bronze
Width: 22 mm
Length: 307 mm

Product short description:

This antique solid bronze track, 300 mm long, is fitted with its original sliding car and locking screw. This type of fitting is commonly found on classic and traditional sailing yachts for adjusting the mainsail outhaul, the spinnaker pole, or running rigging requiring an adjustable attachment point.

The car slides freely along the full length of the track and can be secured in the desired position using the clamping screw.

With its robust construction and traditional design, this assembly is well suited to the restoration of a classic yacht, vintage sailing boat, or any vessel requiring authentic period marine hardware.

Supplied with its original sliding car.

Antique second-hand marine fitting, sold in its original condition.
